ABSTRACT

The disclosure relates to a memo processing device is configured to include a camera for filming videos, a memo acquisition unit for specifying a subject to which a memo is to be attached in the filmed video and storing the subject and the memo in a memory, and a memo presentation unit for displaying a memo stored in the memory as an overlay on a screen when the camera faces the subject. The memo processing device may be appropriately adopted by a portable terminal device such as a smartphone, or a mobile device of various kinds, such as Google Glass or a head-mounted display that is worn on the body, such as the head, as appropriate.
