(57) **ABSTRACT**

A cable handling device may include a clamp assembly having a first member having a jaw end and an arm end and a second member having a jaw end and an arm end. The first and second members of the clamp assembly are pivotally connected together so that when the arm ends are moved away from one another the jaw ends move away from one another and vice-versa. A proximal end of a first elongate electrically insulated handle is mounted to the arm end of the first member of the clamp assembly. A proximal end of a second elongate electrically insulated handle is mounted to the arm end of the second member of the clamp assembly.
